Unlock disciplinary silos

Be the player of your training

In addition to their master's program (major), students from DS4H Graduate school have the opportunity to enrich their curriculum with a unique catalog of multidisciplinary courses (minors in law, business, entrepreneurship, creative industries, etc.), tutorships (laboratory immersion) and individual or group projects. By combining these options, over the semesters, they build their *à la carte* training program according to their personal and professional goals. They acquire sought-after competencies (technical skills and «soft skills») for their future career in research, higher education, research and development, industry and services, start-ups, etc.

Université Côte d'Azur (UCA) brings together all of the well-known, internationally visible higher education and public and private research entities on the Côte d'Azur. UCA, through its academies, staff and alumni, strives for excellence and educates students to the highest standards. UCA promotes transdisciplinarity and fosters interactions between academic research and private development research to offer an environment and networks in which talents can bloom and grow extensively.
