The a priori of data flow - A legal and multidisciplinary research

Thesis Supervisor: Jean-Sylvestre Bergé, jean-sylvestre.berge@univ-cotedazur.fr, 06 68 03 72 85, ED DESPEG

Host laboratory: CNRS GREDEG (UMR 7321)

Subject description:

The law regulates the circulation of data on a large scale. These constructions, like any other construction of law, are based on a set of assumptions, presuppositions, prejudices, paradigms, beliefs, commonplaces, biases or emotions. This thesis project aims to highlight the meaning of these a priori in order to provide a critical analysis of the law. It requires a good knowledge of digital law and an ability to engage in multidisciplinary research, especially with computer scientists. Finally, this proposition is part of the IDEX UCAjedi ANTECEDENT Chair
